

**This is the BDUJWJUZ for today.**

The writer just moved every letter over by 1: A became B, B became C, C became D (this means the coded letter B corresponds to the real letter A). Can you decode the word **BDUJWJUZ** ?

### **Coding Wheel.**

Print out or copy the wheel. Cut out the big and small circle and place a round fastener in the middle. The outside letter is the decoded (actual letter) and the inside letter is the coded letter.

There is more than one way of coding with the wheel. How many do you think there are in total?

**Your name.** Can you code your name using the code of your choice?

### **Mister Spy.**

Mister Spy sent you a message. He used the Coding Wheel to replace the letters in his message. Can you figure out what it says?

XYUL ECXM,

AIIX DIV VLYUECHA NBY WIXY!

GCMNYL MJS

Hint: What do you usually write at the very end of a letter?

### **Match.**

Match the word with the picture (A different code was used for every word)

DYWKDY

DGPCVT

GFSFSF
